

GUSTAVO GAROZZO

Backend Engineer | Node.js • TypeScript • NestJS

Tandil, Buenos Aires, Argentina • gustavogarozzo@gmail.com • +54 (249) 449-4994 • linkedin.com/in/gustavogarozzo
gustavo-garozzo.vercel.app

PROFESSIONAL SUMMARY

Backend Engineer with 4+ years of professional experience building backend services, REST APIs, microservices, and system integrations using Node.js, TypeScript, and NestJS. Specialized in connecting business systems, ERPs, and marketplaces through APIs, asynchronous processing, and event-driven architectures.

Hands-on experience with PostgreSQL, Redis, AWS, and Google Cloud, with a focus on integration reliability, API design, query optimization, CI/CD, Docker, automated testing, and Swagger/OpenAPI documentation. Experienced in translating business requirements into maintainable, production-oriented backend solutions.

Complementing my backend profile with AI Engineering projects focused on integrating LLMs into real applications, including structured outputs, response evaluation, tool calling, and RAG.

PROFESSIONAL EXPERIENCE

Backend Engineer / Backend Developer (Mid-Level) | Node.js / NestJS

Aiotek

Sep 2023 – Jun 2026 • Tandil, Argentina

- Standardized ERP and marketplace integrations by establishing a reusable backend pattern for the team using Node.js, NestJS, REST APIs, and Swagger/OpenAPI.
- Developed and evolved REST APIs and microservices for Seller Manager, integrating multiple ERPs and marketplaces, including Global Blue Point, Aleph, Riiing, Contabilium, Tienda Bancor, and Megatone.
- Increased invoice synchronization reliability between an external FTP server and backend services through connection recovery and controlled processing, preserving data consistency under concurrent workloads.
- Decoupled invoicing flows by processing integration events independently through Google Cloud Pub/Sub and asynchronous processing.
- Resolved production contention and latency issues by optimizing critical queries and transactions across PostgreSQL and Google Cloud SQL.
- Improved service resilience through a generic NestJS exception-handling mechanism and automated email notifications for application errors.
- Automated image format, dimension, and size transformations through a reusable API for multiple marketplaces, reducing manual processing.
- Centralized API documentation with Swagger/OpenAPI to improve communication between backend, QA, and integration teams within a multidisciplinary Agile environment.

Technologies: Node.js, NestJS, TypeScript, PostgreSQL, Google Cloud SQL, Redis, Google Cloud Pub/Sub, Cloud Monitoring, Docker, AWS, GitHub Actions, Jest, Swagger/OpenAPI, REST APIs, Microservices, Event-Driven Architecture

Backend Developer | Node.js / NestJS

Qwavee IT

Nov 2022 – Sep 2023 • Tandil, Argentina

- Modernized a critical agricultural calculation system by migrating a legacy codebase to NestJS and TypeScript, introducing a modular and strongly typed backend architecture to improve maintainability, testing, and evolution.
- Implemented a serverless backend architecture on AWS using Lambda, API Gateway, and S3, enabling on-demand execution and reducing reliance on dedicated server infrastructure.
- Developed REST APIs and automated data-processing workflows for agricultural analysis and carbon-footprint calculation systems.
- Automated calculation and data-generation processes through structured JSON outputs, reducing manual intervention and transcription errors.
- Translated business requirements into maintainable backend services while contributing to development, testing, and CI/CD within a multidisciplinary team.

Technologies: Node.js, NestJS, TypeScript, AWS Lambda, API Gateway, S3, Serverless Framework, PostgreSQL, Docker, REST APIs, JSON, Git, CI/CD

Backend Developer | PHP

Qwavee IT

Feb 2022 – Nov 2022 • Tandil, Argentina

- Executed the migration of a government website from Drupal 7 to Drupal 9 while preserving data, permissions, and content structure without perceptible service interruption.
- Automated migration and maintenance tasks through PHP scripts and database processes, reducing manual intervention during the transition.
- Stabilized critical post-migration functionality through production troubleshooting and issue resolution.

Technologies: PHP, Drupal 7, Drupal 9, MySQL, Git, Data Migration, Automation

PROJECTS

Barking Dogs — Co-founder / Full-Stack Developer

barkingdogs.tech

- Co-founded and developed web and mobile products for real clients, contributing to architecture, development, deployment, and ongoing evolution of production solutions.
- Accelerated frontend development workflows through an AI-first, multi-agent approach using AI agents, MCPs, and Skills/context anchors.
- Developed Sinergy Consulting Platform, a B2B full-stack platform that achieved 96/100 Performance and 100/100 SEO scores according to Lighthouse.
- Developed WatchDog Price Tracker, an Android application for price and availability monitoring with real-time push notifications, published on Google Play.

Technologies: TypeScript, Next.js, NestJS, React Native, AWS, PostgreSQL, Android, AI Agents, MCP, Skills, CI/CD
Weather API — AI Engineering Project

https://github.com/gusgarozzo/weather_api

- Developed a REST API that integrates weather information with an LLM to generate structured responses about current conditions, recommendations, and risk level.
- Implemented structured outputs and validation of generated responses to make the integration between the model and backend application more reliable.
- Implemented automated evaluation using defined test cases and criteria, applying AI Engineering practices to LLM-based system quality.
- Designed the project roadmap around tool calling, RAG, context retrieval, and model-provider abstraction, with a focus on maintainable AI systems.

Technologies: Node.js, NestJS, TypeScript, REST APIs, LLMs, Structured Outputs, AI Evaluation, Tool Calling, RAG, Redis

TECHNICAL SKILLS

Backend: Node.js, TypeScript, NestJS, Express.js, JavaScript, REST APIs, Microservices, Event-Driven Architecture, Asynchronous Processing

Databases: PostgreSQL, Google Cloud SQL, Redis, MySQL, Sequelize

Cloud & Infrastructure: AWS, Google Cloud, AWS Lambda, API Gateway, S3, Google Cloud Pub/Sub, Cloud Monitoring, Serverless Framework, Docker

Architecture & Engineering: API Design, System Integration, Distributed Systems, Swagger/OpenAPI, Clean Architecture, Domain-Driven Design (DDD), Design Patterns

Testing & CI/CD: Jest, Unit Testing, End-to-End Testing, GitHub Actions, GitLab CI/CD, Continuous Integration, Continuous Delivery

AI Engineering: LLMs, Generative AI, AI Agents, MCP, RAG, Structured Outputs, Tool Calling, AI Evaluation, AI-Assisted Software Development

Tools & Practices: Git, Linux, Agile/Scrum, Code Review, Technical Documentation, Pair Programming

EDUCATION

University Technical Degree in Information Systems Development

National University of Central Buenos Aires Province (UNICEN)

2020 – 2023

English — B2 (Upper-Intermediate)

National Technological University (UTN)

2022

CERTIFICATIONS

AI-Driven Software Architecture: Practical Application — LinkedIn Learning

Software Architecture: Essential Patterns — LinkedIn Learning

Software Architecture: Domain-Driven Design (DDD) — LinkedIn Learning
